SOLACE GLOBAL

### Executive Summary

The number of confirmed COVID-19 cases globally has surpassed 5.5 million, with approximately 347,000 deaths and approximately 2.3 million recoveries. Nearly all countries globally have reported at least one case and have implemented some form of travel restriction. While the situation has stabilised in many European and Asian countries in the past weeks, it is highly likely that the in-place travel restrictions, both internationally and domestically, will remain in place for the foreseeable future. Internally, some countries are beginning to ease their restrictions; however, this process will be slow, with restrictions on international travel likely to be one of the last measures to be lifted.

Solace Global continues to advise against all non-essential travel at this time due to the widespread travel restrictions. However, if conducting essential travel, it is advised that you check your relevant government's travel advice and contact your airline or travel provider for more details. Be aware that it is likely that many destinations globally will have some form of quarantining measures in place upon arrival. At this time, Solace Global still advises that people aged 70 and over, or those with underlying health issues, should also reconsider their need to travel, even domestically, as to limit their chances of exposure.

### Latest Updates

The White House has imposed an entry ban on foreign nationals who have been to Brazil within two weeks prior to their request to enter the United States. The ban, which is due to take effect from 28 May, will not apply to US citizens, or to the spouse, parent, legal guardian, or child of a US citizen or permanent resident. Brazil recently overtook Russia to become the world's second worst-affected nation in terms of total COVID-19 cases, where the number of deaths has been doubling almost every two weeks, compared to about every two months in the United Kingdom. Moreover, experts fear that Brazil's true figures could be far higher due to a lack of testing.

In other news, US President Donald Trump's National Security Adviser, Robert O'Brien, accused China of covering up the coronavirus outbreak on two political talk shows on Sunday 24 May. Speaking on the shows, Mr O'Brien said the cover-up will "go down in history along with Chernobyl" while also claiming that Beijing gave "false information" to the World Health Organisation at the start of the year. In response, Chinese Foreign Minister Wang Yi said that Washington seemed to be infected by a "political virus" that risked pushing the two nations to "the brink of a new Cold War".

Meanwhile in Spain, lockdown measures have been amended as this country continues a phased return to normality. Under the new measures, people in Barcelona and Madrid will be able to meet in groups of up to 10 people in their homes or on the terraces of bars and restaurants, while some of the country's beaches are set to reopen. The wearing of face masks is still compulsory in buildings or on public streets when it is not possible to maintain social distancing. In areas allowed to enter Phase 2, restaurants are able to reopen to a limited number of customers and daily exercise will no longer be limited to certain hours of the day. The Spanish Government has hinted that tourism will resume in July.

Elsewhere in Europe, the French government has announced that all British travellers entering the country from the UK will be required to undergo a mandatory 14-day period of quarantine. The restriction is due to be implemented on 8 June and mirrors a decision announced by the UK Home Secretary Priti Patel earlier this week. In Monaco, authorities have announced that from 2 June, all bars, cafes, restaurants, museums and casinos will reopen, albeit under social distancing measures. A maximum of six people will be permitted to sit on one table and all tables must be separated.

In Cyprus, the government has reopened beaches as the island prepares to restart its tourism industry. Social distancing rules have been imposed and beach umbrellas and sun loungers are to be routinely cleaned. Cypriot authorities intend to restart flights on 9 June to and from Greece, Malta, Bulgaria, Norway, Austria, Finland, Slovenia, Hungary, Israel, Denmark, Germany, Slovakia, and Lithuania. Passengers arriving from these countries must obtain a permit three days before travelling confirming they are virus-free.

In South Africa, President Cyril Ramaphosa has announced he will further relax COVID-19 lockdown measures from 1 June, allowing most of the economy to reopen. Most businesses, not including hair salons and beauty parlours, will be allowed to resume operations under strict social distancing measures. Restaurants, bars and pubs will also remain closed except for takeaway and collection services. In addition, the overnight curfew which is currently in place between 20:00 and 05:00 will be lifted and schools will be allowed to re-start. A controversial ban on alcohol will also end, with limited sales allowed for home consumption only and "only under strict conditions on specified days and for limited hours", according to the President. However, the ban on the sale of cigarettes will remain in place "due to the health risks associated with smoking".

Indian authorities will allow domestic flight operations to resume from today, despite a 24-hour record spike in new cases on Sunday. The country's federal aviation minister stated that the resumption of domestic services follows a day of "hard negotiations" after some states sought to limit the number of flights.

**Region Specific Updates and New Restrictions – Be aware these are fluid and subject to change, check for any updates prior to travel.**

<b>Asia</b>	<p>While restrictions across the region remain extensive, some countries are now easing their internal lockdown measures after successfully managing to curb their outbreaks; these include China, Taiwan and South Korea.</p> <p>International travel restrictions will, however, likely remain in place for the time being. China, for example, has implemented a limit on the number of flights to the country and are denying entry to foreigners with previously issued visas and residence permits.</p>
<b>Europe</b>	<p>The EU Commission has invited all Schengen Member States and Schengen Associated States to prolong the temporary restriction on non-essential travel to the EU until at least mid-June. Airlines, however, continue to operate limited flights to and from the majority of EU countries.</p> <p>European countries are now seeing an easing of internal and international restrictions after overcoming the peak of the outbreak in their countries. Most recently, Spain and Italy have announced a relaxing of lockdown measures.</p>
<b>Americas</b>	<p>The US continues to be the worst affected country globally. The majority of states had imposed restrictions or have 'stay-at-home' orders in response to the outbreak. However, in recent days and weeks, many states have begun to ease measures and have allowed businesses to resume limited operations as part of phased reopening plans.</p> <p>The US has implemented a level 4: Do Not Travel global advisory. The Department of State advises US citizens to avoid all international travel due to the global impact of COVID-19 and for those who are currently abroad to return as soon as possible. The United States has also ordered a border closure for all non-essential travel from both Canada and Mexico.</p> <p>The majority of countries in the Americas have some form of restriction on both internal and international travel.</p>
<b>Africa</b>	<p>African countries have, thus far, not been as severely impacted by the outbreak, with the continent's case numbers lower than all other continents except Oceania. However, the risk that the pandemic poses to Africa cannot be understated. South Africa and Egypt are both seeing a strong increase in case numbers with Cameroon and Sudan also seeing an increase in confirmed cases.</p> <p>As such, many countries implemented lockdown measures very early, when only a handful of cases had been recorded. Indeed, numerous countries announced restrictions before any confirmed cases.</p> <p>While the majority of countries have some form of restrictions in place, especially on major cities, some, including Ghana and South Africa, have begun to start relaxing their lockdowns.</p> <p>International travel is likely to remain limited for the foreseeable future.</p>
<b>Middle East</b>	<p>The Middle East has some significant lockdowns in place, most countries are also now looking to ease restrictions. Saudi Arabia, the UAE and Jordan, among others, have all eased the restrictions on people's movements.</p> <p>Notably, Saudi Arabia has eased restrictions nationwide, with the exception of Mecca, with malls, wholesale and retail shops, also being allowed to reopen from the sixth day of Ramadan. Mecca remains under a 24-hour curfew with calls for the kingdom to postpone Hajj in July. Additionally, Kuwait announced a 'total curfew' from 10 May for 20 days.</p>
<b>Australia /Oceania</b>	<p>All states in Australia appear to have contained the spread of the coronavirus. Most states and territories including Queensland, Western Australia, New South Wales, Northern Territory and Victoria have eased restrictions.</p> <p>Additionally, New Zealand's Prime Minister announced that the country has stopped the transmission of the virus. As such, some of the lockdown restrictions were eased from 11.59 local time on 27 April. Updated reports indicate that New Zealand also lifted the nationwide state of emergency and entered the Level 2 phase. The new phase allows public spaces such as restaurants and gyms to reopen.</p>

<b>Solace Global Advice</b>	<p>At this time, we continue to advise that <b>only business-critical travel is conducted</b>. Otherwise, ensure that you can access the country you intend to travel to. Extensive travel restrictions are making even business-critical travel difficult, as such, it is important that travellers are aware of the restrictions that are in place, including any potential mandatory quarantining, and are prepared for travel to be postponed or disrupted at short notice. It is likely that restrictions will continue to be eased in the coming weeks and months; however, these will remain fluid, with spikes in new cases likely resulting in renewed lockdowns and travel restrictions.</p>
